Cooling meter with unlimited communication

Application

MULTICAL® 602 is an all-purpose energy calculator for cooling and heat/cooling together with almost any kind of pulsed flow sensors and with 2-wired temperature sensor pairs. Used together with Kamstrup ultrasonic flow sensor ULTRAFLOW® 14, even more advanced functions are available. On account of its pinpoint accuracy the meter registers precise consumption throughout the whole lifetime of the meter. The meter is maintenance-free and has a long lifetime which guarantees minimum yearly operating costs.

MULTICAL® 602 and ULTRAFLOW® 14 are used for measurement of cooling and heat/cooling in all water based plants between q_p 1.5 m³/h and q_p 100 m³/h with flow temperatures from 2 °C to 50 °C for cooling installations and flow temperatures from 2 °C to 130 °C for heat/cooling installations.

The meter is simple to install, read and test.

Functionality

MULTICAL® 602 is characterized by its complete range of communication modules and integral RTC (Real Time Clock), which make it easy to fit the meter into all applications independent of reading type. The meter can be fitted with LON, SIOX, M-Bus, a data module, Metasys N2 and Ethernet/IP for wired communication. If the meter is to be integrated into a wireless network, you can select radio, Wireless M-Bus, Zigbee or one of Kamstrup's new modules: GSM/GPRS or High Power RadioRouter.

The calculator's info codes and data loggers make up an invaluable tool for troubleshooting, error correction and analysis of energy consumption. The info logger constantly monitors a number of key functions in the meter, such as error in the measuring system, power failure, leak, burst, or mounting of the flow sensor in the wrong flow direction. In such cases a flashing "INFO" and an info code appear in the display.

MULTICAL® 602 saves consumption data on a yearly, monthly, daily and hourly basis, which provides the operations manager with a complete performance analysis.

Operations optimisation

In case of power failure data is backed up, thus securing billing of consumption data. If the meter is supplied with battery, the battery lifetime has been considerably increased – up to 13 years incl. Wireless M-Bus.

Finally, MULTICAL® 602 with ULTRAFLOW® and the precisely matched temperature sensors guarantee accurate measuring results even at minimal temperature differences. The flow sensor's long-term stability and accuracy are not influenced by flow velocity, flow disturbances or wear, which ensures an optimal operation.

ULTRAFLOW® 14 is not suitable for use with other media than water and should therefore not be used with e.g. non-freezing additives like glycol.

Calculator functions

Energy calculation

MULTICAL® 602 calculates energy based on the formula in EN 1434-1, in which the international temperature scale from 1990 (ITS-90) and the pressure definition of 16 bar is used.

The energy calculation can in a simplified way be expressed as:

$$\text{Energy} = V \times \Delta\Theta \times k.$$

V is the supplied water volume

$\Delta\Theta$ is the temperature difference measured

k is the thermal coefficient of water

The calculator always calculates energy in [Wh], and then it is converted into the selected measuring unit.

E [Wh] =	$V \times \Delta\Theta \times k \times 1000$
E [kWh] =	$E [\text{Wh}] / 1.000$
E [MWh] =	$E [\text{Wh}] / 1.000.000$
E [GJ] =	$E [\text{Wh}] / 277.780$
E [Gcal] =	$E [\text{Wh}] / 1.163.100$

Application types

MULTICAL® 602 operates with 9 different energy formulas, E1...E9, that are all calculated in parallel in connection with each integration no matter how the meter is configured.

In connection with cooling the following energy calculations are used:

E3= $V1(T2-T1)$	Cooling energy (V1 in inlet or outlet)
E8= $m^3 \times T1$	Basis for calculating volume based average temperatures in inlet
E9= $m^3 \times T2$	Basis for calculating volume based average temperatures in outlet

Closed thermal system with 1 flow sensor

Flow measurement

The flow indication is updated every 10 seconds.

Calculator functions

Power measurement

MULTICAL® 602 calculates current power on the basis of current water flow and the temperature difference measured in connection with the latest integration.

Current power is updated in the display simultaneously with the flow update.

Min. and max. flow and power

MULTICAL® 602 registers minimum and maximum flow and power on a monthly as well as on a yearly basis. The registrations which appear from the display or can be read via data communication include max. and min. flow and power values, all with date indication.

All max. and min. values are calculated as largest and smallest average respectively of a number of current flow or power measurements. The average period used for all calculations is selected in the interval 1...1440 min.

Temperature measurement

MULTICAL® 602 and ULTRAFLow® 14 is delivered with Pt500 sensors in 2-wire versions.

The measuring circuit includes a high resolution analog/digital converter with a temperature range of 0.00...185.00 °C. In addition to current temperatures for the energy calculation average temperatures on a yearly and monthly basis can also be displayed.

Display functions

MULTICAL® 602 is equipped with a clear LCD display including 8 digits, units of measurement and information panel. In connection with energy and volume readings 7 digits and the units of measurement to match are used, whereas 8 digits are used when e.g. meter number is read.

As a starting point the display shows accumulated energy. When the push buttons are activated the display reacts immediately by calling other readings. The display automatically returns to accumulated energy reading 4 minutes after the latest activation of the push buttons.

The upper push button is used to switch between the primary readings. The consumers typically use the first primary readings in connection with self-reading for billing purposes.

The lower push button is used to show secondary information on the selected primary reading.

Calculator functions

Set/reset function

The set/reset function of MULTICAL® 602 makes it possible to change a number of parameters by means of the two buttons on the meter's front.

The following parameters can be changed:

- Date
- Hour
- Input A (preset of register)
- Input B (preset of register)
- Meter no. of Input A
- Meter no. of Input B
- Pulse value for Input A
- Pulse value for Input B
- Primary M-Bus address
- Operating hour counter (reset)
- Info-event counter (reset)

In order to get access to the set/reset functions, the installation seal must be broken, and thus the change can only be made by the energy supplier.

Info codes

MULTICAL® constantly monitors a number of important functions, e.g. power supply and temperature sensors. Should a serious error occur in the measuring system or in the installation, a flashing "info" will appear in the display whilst the error exists. The "Info" panel will automatically disappear when the error has been corrected.

An Info Event Logger indicates how many times the info code has been changed.

The info logger stores the latest 50 changes, of which 36 can be displayed.

Info code	Description
0	No irregularities
1	Supply voltage has been cut off
4	T2 sensor outside range, short-circuited or cut off
8	T1 sensor outside range, short-circuited or cut off

Info code	ULTRAFLOW® 14 info (active when CCC=4XX)
16	Flow sensor V1, Data communication error
2048	Flow sensor V1, wrong meter factor
4096	Flow sensor V1, signal too low (Air)
16384	Flow sensor V1, wrong flow direction

Calculator functions

Data loggers

MULTICAL® 602 contains a permanent memory (EEPROM), where the results of a number of various data loggers are stored. The meter contains the following data loggers which can be read on the display or via serial data:

Data logging interval	Data logging depth	Logged value
Yearly logger	15 years	Counter registers (as seen on the display)
Monthly logger	36 months	Counter registers (as seen on the display)
Daily logger	460 days	Consumption (increase)/day
Hourly logger	1392 hours	Consumption (increase)/hour
Programmable data logger (option)	1080 loggings Logging interval 1-1440 min. (e.g. 45 days' hour loggings or 11 days' 15 min. loggings)	Up to 40 optional registers and values
Info logger	50 events	Info code, date, time and energy [E3]

Voltage supply

MULTICAL® 602 is available with battery supply, 230 VAC mains module or 24 VAC mains module. The supply modules are exchangeable without breaking the verification seal.

Plug-in modules

Plug-in modules can be added to MULTICAL® 602 both in the calculator top (top modules) and in the base unit (base modules), in this way the meter can adapt to various applications and data reading methods.

Programming and testing

METER TOOL HCW is a Windows® -based software which includes all facilities for calculator programming. If the software is used together with VERIFICATION EQUIPMENT for MULTICAL® 602, the calculator can be tested.

Tariff functions

MULTICAL® 602 has 2 extra registers TA2 and TA3 to accumulate energy parallelly to the main register based on a programmed tariff condition. No matter which tariff type you select the tariff registers will be displayed as TA2 and TA3.

The main register is always accumulated, irrespective of the selected tariff function, as it is considered the legal billing register. Tariff conditions TL2 and TL3 are monitored before each integration. If the tariff conditions are fulfilled, the consumed cooling energy is accumulated in either TA2 or TA3, as well as the main register.

Calculator functions

Pulse outputs CE and CV

MULTICAL® 602 has pulse outputs for energy and volume pulses respectively. CE on terminals 16-17 releases one pulse per least significant digit of the energy count in the display and CV on terminals 18-19 releases one pulse per least significant digit of the volume count in the display.

If a higher resolution of pulse outputs is required, a CCC code with high resolution must be selected. The pulse outputs CE and CV are located on selected "top modules".

Pulse inputs VA and VB

MULTICAL® 602 has two extra pulse inputs, VA and VB, to collect and accumulate pulses remotely, e.g. from cold-water meters and electricity meters. The pulse inputs are located on the "base modules".

The pulse inputs VA and VB function independently of the other inputs/outputs.

MULTICAL® 602 & ULTRAFLOW® 14 Cooling

Electrical data

Typical accuracy

- Calculator	$E_c \pm [0.15 + 2/\Delta\Theta] \%$
- Sensor set	$E_T \pm [0.4 + 4/\Delta\Theta] \%$
- Flow sensor	$E_F \pm [1 + 0.01 \times q_p/q] \%$

Supply voltage

3.6 VDC \pm 0.1 V

Battery

3.65 VDC, D-cell lithium

Stand-by current

< 85 μ A

Replacement interval

- Mounted on wall

12+1 years @ $t_{BAT} < 30^\circ\text{C}$

The replacement interval is reduced when using data modules, frequent data communication or at high ambient temperature

Mains supply

230 VAC $\pm 15/-30 \%$, 50/60 Hz

24 VAC $\pm 50 \%$, 50/60 Hz

Insulation voltage

4 kV

Power supply

< 1 W

Backup supply

Integral super-cap eliminates operational stop-down due to shortterm power cuts (this only applies for supply modules type 602-0000-7 and 602-0000-8).

EMC data

Domestic and light industrial

Calculator data

Display

LCD - 7 (8) digits with a digit height of 7.6 mm

Resolution

9999.999 - 99999.99 - 999999.9 - 9999999

Energy units

MWh - kWh - GJ - Gcal

Temperature range

Θ : 0.01...180 $^\circ\text{C}$

Differential range

$\Delta\Theta$: 0.01...170 K

Data logger (Eeprom)

- Standard

1392 hours, 460 days, 36 months, 15 years, 50 info codes

- Option

Data loggers with larger depth and hour interval

Clock/calendar

Clock, calendar, leap-year compensation, target date, Real time clock with battery back-up

Data communication

KMP protocol with CRC16 used for optical communication and for top and base modules

Power in temperature sensors

< 10 μ W RMS

Temperature measurement

Sensor inputs T1, T2

- Measuring range

0.00...185.00 $^\circ\text{C}$

Max. cable lengths

- Pt500, 2-wire

2 x 0.25 mm²: 10 m

2 x 0.50 mm²: 20 m

Dimensional sketches flow sensors

ULTRAFLOW® 14, DN25 to DN50

Flange EN 1092, PN25

Flange facing type B, raised face

Nom. diameter	L	M	H2	B1	D	H	k	Bolts			App. weight [kg]
								No.	Thread	d ₂	
DN25	260	L/2	89	58	115	106	85	4	M12	14	5.0
DN40	300	L/2	89	<D/2	150	136	110	4	M16	18	8.3
DN50	270	155	89	<D/2	165	145	125	4	M16	18	10.1

ULTRAFLOW® 14, DN65 to DN125

Flange EN 1092, PN25

Flange facing type B, raised face

Nom. diameter	L	M	H2	B1	D	H	k	Bolts			App. weight [kg]
								No.	Thread	d ₂	
DN65	300	170	89	<H/2	185	168	145	8	M16	18	13.2
DN80	300	170	89	<H/2	200	184	160	8	M16	18	16.8
DN100	360	210	89	<H/2	235	220	190	8	M20	22	21.7
DN125	350	212	89	<H/2	270	260	220	8	M24	28	28.2

Installation of calculator

Front, vertical

Front, at an angle between horizontal and vertical

Front, horizontal

Note! Cables **must** be installed from below.

Installation example with suspension

Note:

The suspension **must** not be used on condensing pipes.
Suspension kit item no. 5915-144. Not included.

Installation of temperature sensors

Temperature sensors must be mounted from below.

Mounting of flow sensors

Before mounting the flow sensor, flush the system thoroughly and remove protection plugs/plastic membranes from the flow sensor. Correct flow sensor position (inlet or outlet pipe) appears from the front label placed on the MULTICAL® 602. The flow direction is indicated by an arrow on the side of the flow sensor.

Glands and gaskets must be mounted as shown on the drawing above.

Straight inlet: ULTRAFLOW® 14 requires neither straight inlet nor outlet to meet the Measuring Instruments Directive (MID) 2004/22/EC, OIML R75:2002 and EN 1434:2007. Only in case of heavy flow disturbances before the meter will a straight inlet section be necessary. We recommend following the guidelines in CEN CR 13582.

To prevent cavitation, the operating pressure at ULTRAFLOW® 14 must be min. 1.5 bar at q_p and min. 2.5 bar at q_s . ULTRAFLOW® 14 must not be exposed to pressures below ambient pressure (vacuum).

Mounting of ULTRAFLW® 14

ULTRAFLW® 14 can be mounted vertically, horizontally or at any angle in between.

ULTRAFLW® 14 may be turned upwards to maximum 45° in relation to horizontal.

The ULTRAFLW® 14 housing must not be mounted facing upwards or downwards.
